

What it is

Xsense[®] is a monitoring solution based on a combination of wireless dataloggers, datalogger readers and a portal in the cloud. Xsense provides convenient automatic data collection and reporting of sensor readings.

Price point

Competitively priced compared to other datalogger solutions.

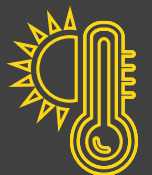

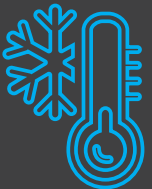

Monitoring Solutions

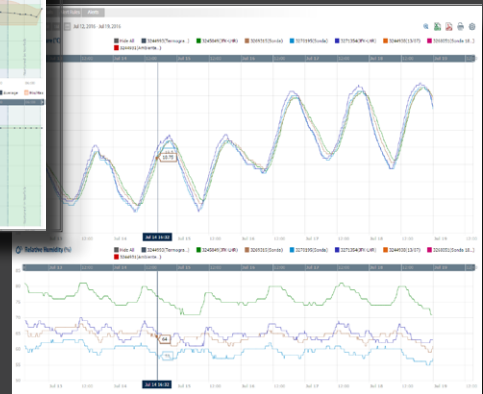

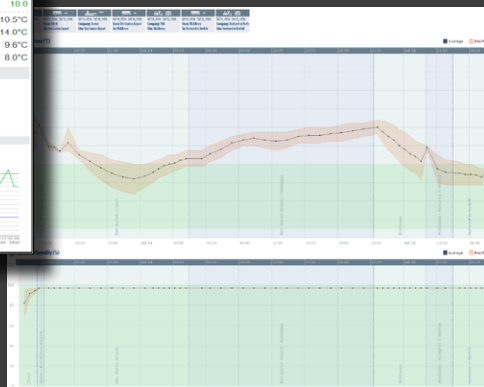

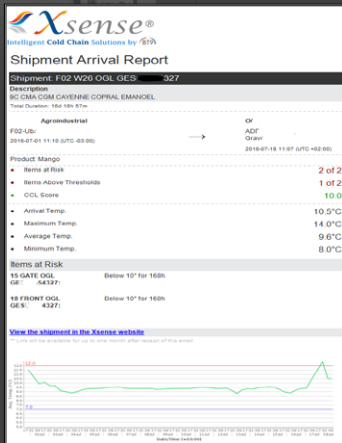

Xsense[®] Facility Monitoring

Xsense[®] for Shipment: Advanced technology system for single and multi-segment shipments, national and international shipment, including cycle shipments.

Advantages

- Temperature and relative humidity sensors in the same datalogger.
- Datalogger automatically connects to our wireless reader, eliminating the need to locate the datalogger and download the data manually.
- Automatic notifications with complete graphs distributed via Email.
- Notifications may be sent to both the shipper and the receiver at same time, eliminating manual download and forwarding of shipment data.
- Arrival notifications available for intermediate waypoints incorporating readings recorded up to that point.
- Real-time readings available.
- Dedicated company page in the Xsense Portal with the option to see active and historic shipments.
- Weekly shipment arrival reports providing consolidated data that can be used to identify persistent problems and perform benchmarks.
- Android and iOS mobile applications permit shipment creation and tracking from mobile devices.

Xsense® Hitag Options:

Ambient or probe temperature sensors alone or paired with relative humidity sensors.

Temperature range: Regular (-12C to 50C), Freeze (-35C to 25C)

Reading interval: 8/16, 30/60 minutes

Life time: 1, 3, 9, 12 month
